Allowable Subject Matter

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Bae teaches a method for driving a vibrator 23,24 in a closed loop, the loop including a "loop circuit" 29 that feeds a square wave back to the vibrator. However, Bae does not state that the "loop circuit" is either a CR oscillator or ring oscillator.

Miller teaches (Figure 7) a densitometer that is similar (vibrator 24, in a loop with a rectangular wave output from squarer 83) to that of Bae. However, the differentiator 82 and squarer 83 are not either a CR oscillator or ring oscillator.

The following is a statement of reasons for the indication of allowable subject matter: As to claims 1,2, note was made of the "CR oscillator" in combination with remaining claim limitations. As to claims 3,4, note was made of the "ring oscillator" in combination with remaining claim limitations.
